AAY27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXICGSAN2 3', where at least one uncleotide separates consecutive CpGs, XI is adenine, guanthe, or thymine, X2 is cytosine or thymine, N is any nucleotide and NI+N2 is 0-26 bases with the provision that NI and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer OR 5' NIXIZCGX3X4N 3', where at least one nucleotide separates consecutive CpGs, XI and X2 are selected from CGC or CGG tetramer or more than one CCG or CGG tetramer or more than one CCG or CGG tetramer or more than one CCG or CGG trimer. The ODNs acrivate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other CCC or produce Th1 cytokines, including IL-12, IFN-gamma and GM-CSF).

The ODNs can be used to treat or prevent an asthmatic disorder, adjuvant during antibody generation in a mammal such as a mouse or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                    Immunostimulatory, oligodeoxyribonucleotide; ODN;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents an unmethylated CpG dinucleotide, and can be used in the method of the invention. The method is for treating a subject having, or a risk of having an acute decrement in air flow, comprising administering a nucleic acid sequence containing at least one dinistering a nucleic acid sequence containing at least one containing at least one unmethylated CpG. The nucleic acids containing an unmethylated CpG. The nucleic acids containing an unmethylated CpG containing an unmethylated CpG. The nucleic acids containing an unmethylated CpG. The nucleic acids containing an unmethylated CpG. The nucleic acids containing an unmethylated CpG. Contained a subject's immune response from a Th2 to a Th1 response by inducing monocytic and other cells to produce Th1 contained by inducing monocytic and other cells to produce Th1 contained as sethma or environmentally induced airway disease. They can also be used to treat diseases associated with Grampositive bacterial infections or endotoxaemia including bacterial containing its, neonatal sepsis, cystic fibrosis, inflammatory bowel disease and liver cirrhosis, Gram-negative pneumonia, Gram-negative abdominal abscess, haemorrhagic shock, disseminated intravascular coagulation, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Immunostimulatory; oligodeoxyribonucleotide; ODN;

Synthetic

```
AAV27641-751 represent immunostimulatory oligodecxyribonucleotides (ODNs) C the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' MIXIGGARN2'3', where at least one uncleotide separates consecutive CpGs, XI is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 cc more than one CGG or CGC trimer OR 5' MIXICGGARAN 3', where at least con mucleotide separates consecutive CpGs, XI and X2 are selected from CpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 consent or contain a CCGG tetramer or more than one CCG or CGG trimer. The Cobs not contain a CCGG tetramer or more than one CCG or CGG trimer. The cobs activate lymphocytes in a subject and redirect a subject's immune CCC response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other CCC cells to produce Th1 cytokines, including In-12, IFN-gamma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic diseases, in desensitisation therapy, as an artificial
                                                                                                                                                                                                                                                                                                                                             New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunostimulatory; oligodeoxyribonucleotide; ODN; unmethylated CpG dinucleotide; activate; lymphocyte; immune response; Th2; Th1; cytokine; treatment; prevention; asthma; autoimmune disease; desensitisation therapy; artificial adjuvant; antibody generation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunostimulatory oligodeoxyribonucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ANY27641-751 represent immunostimulatory oligodecxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXXCGX2N2 3', where at least one uncleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytoaine or thymine, N is any nucleotide and N1+N2 is 0-26 thymine, X2 is cytoaine or thymine, N is any nucleotide and N1+N2 is 0-26 to more than one CGG or CGG trimer OR 5' NIXX2CGX3X4N 3', where at least cone nucleotide separates consecutive CpGs, X1 and X2 are selected from CpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer. The Cobs activate lymphocytes in a subject and redirect a subject's immune cobs activate lymphocytes in a subject and redirect a subject's immune cobs activate lymphocytes in a subject and redirect a subject's immune colls to produce Th1 Cytokinas, including In-12, IFV-9amma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic disorder, a uncimmune diseases, in desensitisation therapy, as an artificial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
     unmethylated CpG dinucleotide; activate; lymphocyte; immune response; Th2; Th1; cytokine; treatment; prevention; asthma; autoimmune disease; desensitisation therapy; artificial adjuvant; antibody generation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        unmethylated CpG dinuclectide; activate; lymphocyte; immune response; Th2; Th1; cytokine; treatment; prevention; asthma; autoimmune disease. desensitisation therapy; artificial adjuvant; antibody generation; ss

                                                                                                                                                            AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: $\tilde{S}$ NIXICGXN2 3.4, where at least one nucleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer OR 5' NIXIZCGX3X4N 3', where at least one nucleotide separates consecutive CpGs, X1 and X2 are selected from CpT or one nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer. The ODNs activate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing moncoytic cells and other cells to produce Th1 cytokines, including IL-12, IFN-gamma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic disorder, autoimmune diseases, in desenstication in a mammal such as a mouse or a

Sequences AA241856-Z41949 are phosphorothioate CDG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating cytokine and an immunostimulatory CpG oligonucleotide to immunopotentiating cytokine and an immunostimulatory CpG oligonucleotide consequed as a consequence a synegistic antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune consequence against a cancer antigen. The methods can also be used to treat concrinoma, fibroma, inhumanes, including but not limited to: sarcoma, carcinoma, fibroma, inhumanes, including but not limited to: sarcoma, carcinoma, fibroma, inhumbona, melanoma, neuroblastoma, retinoblastoma, and glioma. The methods are also useful for treating infectious diseases. CT methods may also be used to treat allergic diseases, e.g. asthma. The methods and compositions may also be applied to treat cancer and tumours contagious diseases. As and subjects, e.g. cats and dogs. Neoplasias affecting agricultural livestock may also be treated and include leuksemia, haemangiopericytoma and bovine ocular neoplasia. Chronic, infectious, contagious diseases of sheep and goats caused by the bacterium of sheep caused by jaagsiekte may also be treated. CpG oligonucleotides can be useful in activating B cells, NR cells, and contagious lung tumour of such as monocytes and macrophages. CpG oligonucleotides can be useful in activating B cells, NR cells, and antigen presenting cellular cytotoxicity and can be useful as antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CpG oligonucleotide; phosphorothioate; interleukin-12; IL-12; secretion; human PBMC; immune response; cancer; HIV; bacterial disease; asthma; neoplastic disorder; jaagsiekte; B cell; NK cell; ss; cytokine; antigen presenting cell; infection; allergic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAZ41856-Z41949 are phosphorothicate CpG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating oytokine and an immunostimulatory CpG oligonucleotide in manusopotentiating oytokine and an immunostimulatory CpG oligonucleotide to induce a synergistic antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune response against a cancer antigen. The methods can also be used to treat neoplastic disorders in humans, including but not limited to: sarcoma, carcinoma, ifbroma, improma, impland, melanom, neuroblastoma, carcinoma, ifbroma, improma, impland, melanom, neuroblastoma, carcinoma, ifbroma, improma, impland, melanoma, including but not limited to: sarcoma, carcinoma, ifbroma, improma, also be useful for treating infectious diseases.

CC The methods and sompositions may also be applied to treat cancer and tumours contends and compositions may also be treated and include leukaemia, hamman subjects, e.g. cats and dogs. Neoplasias affecting agricultural livestock may also be treated and include leukaemia, contagious diseases of sheep and goats caused by the bacterium contagious functions of sheep caused by jagasikte may also be treated. CpC oligonucleotides can be cuseful in activating B cells, NK cells, and antigen presenting cells, custing and macrophages. CpG oligonucleotides enhance antibody and compositive and macrophages. CpG oligonucleotides enhance antibody contagious dispases and macrophages. CpG oligonucleotides enhance antibody antivers antibody and antigen and antigen and antigen presenting contagious dispases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                             Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunostimulatory; stereoisomer; CpG oligonucleotide; Th2; Th1; asthma; allergic reaction; allergen; cancer antigen; cancer; immunoinhibitory; inflammatory disease; inflammatory bowel disease; autoimmune disease; ginglvitis; psoriasis; sepsis; ss.

AAZ60933-Z61015 represent immunostimulatory stereoisomers of CpG oligonucleotides. The sequences are derived from generic nucleic acid sequence, from which immunoinhibitory sequences may also be derived. The immunostimulatory nucleic acids can be co-administered with an antigen to induce an antigen-specific immune response. The immunostimulatory nucleic acids can also be used in methods for redirecting a subject we immune response to response from a Th2 to a Th1, for treating asthma, for desensitising a subject against the occurrence of an allergic reaction in response to contact with an allergen, for activating an immune cell, especially a lymphocyte or a dendritic cell expressing a cancer antigen of for treating cancer. The immunoinhibitory nucleic acid can be used to prevent an immune response, especially where the immune response in the subject is excessive due to having received an immune response in the subject is excessive due to having received an immune response. Proving or at immunoinhibitory nucleic acid can be used to treat a subject having or at immune inhibitory nucleic acid can be used to treat a subject having or at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of CpG containing oligonucleotides for, e.g. inducing an antigen-
specific immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes a method using CpG containing
cligonucleotides (ONs) for regulating immune system remodeling and for
cligonucleotides (ONs) for regulating immune system remodeling and for
cegulating haematopolesis. The method for inducing an antigen-specific
immune response comprises: (1) administering an ON having a sequence
including at least 3 days after the ON is administered to the subject to a
antigen at least 3 days after the ON is administered to the subject to
confource an antigen-specific immune response: 5 XICGX2 3' (1), where the
CX = nucleotides at least 8 nucleotides; C and G = unmethylated, and X1 and
X2 = nucleotides. The method can be used for inducing an immune response
against an antigen such as cells, cell extracts, proteins,
polysaccharides, polysaccharide conjugates, lipids, glycolipids,
carbohydrate, viral extracts, viruses, bacteria, fungi, parasites and
allergic reaction. It can be used in a subject at risk of developing cancer or an
allergic reaction. It can also be used for treating an infectious
disease, allergic diseases and asthma, as well as thrombocytopaenic
ctrombocytopenic purpura, or resulting from accidental or therapeutic
ctrombocytopenic purpura, or resulting from accidental or therapeutic
ctrombocytopenic purpura, or resulting from accidental or therapeutic disorders such as
chacked anaemia, immunohaemolyvic disorder, genetic disorders production
despite adequate iron stores, chronic disease such as kidney failure, and
chronic inflammatory disorder such as rheumatoid arthritis, or anaemia
chacked anaemia phosphorothioate CGG oligonucleotides used in the
capacitic accidental or therapeutic radiation exposure. AAX47932 to
capacitic adequate iron of the present invention

The present invention describes a method using CpG containing
cligonucleotides (ONs) for regulating immune system remodeling and for
cregulating haematopolesis. The method for inducing an antigen-specific
immune response comprises: (1) administering an ON having a sequence
including at least the formula (1); and (2) exposing the subject to an
antigen at least the formula (1); and (2) exposing the subject to an
antigen at least a days after the ON is administered to the subject to an
produce an antigen-specific immune response: 5' XICGX2 3' (1), where the
CC or including at least B nucleotides; C and G = unmethylated, and X1 and
CX = nucleotides. The method can be used for inducing an immune response
against an antigen such as cells, cell extracts, proteins,
CC approacharides, polysaccharide conjugates, lipids, glycolipids,
CC arbohydrate, viral extracts, viruses, bacteria, fungi, parasites and
allergic reaction. It can also be used for treating an infectious
allergic reaction. It can also be used for treating an infectious
clisease, allergic diseases and asthma, as well as thrombocytopaenia which
is drugi-induced, due to an autoimmune disorder, spenetic disorders such as
chadiation exposure. It can also be used for treating anaemia such as despite adequate iron stores, chronic disease such as kidney failure, and
chronic inflammatory disorder used in the
control of the present invention
cresulting from accidental or therapeutic radiation exposure. Adx49032 to
changle fication of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mucosal immunity; immunostimulatory; CpG motif; immune response; antigen; allargic reaction; cancer; infectious disease; asthma: eczema; allargic rhinitis; coryza; hay fever; conjunctivitis; bronchial asthma; utticaria; food allergy; atopic condition; mucosal delivery; ss.
                                 Use of CpG containing oligonucleotides for, e.g. inducing an antigen-
specific immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This sequence represents a B cell stimulatory oligonuclectide. The invention relates to compositions comprising an oligonuclectide (I) with unmerlylated guantine and cytosine nucleotides and an antigen in a carrier. The oligonuclectides can be administered to a subject in a carrier. The oligonuclectides are immunestimulatory composition with an antigen in a carrier to enhance an immune response by chancing B cell activation. The oligonuclectides are immunestimulatory and can be used to treat, prevent or ameliorate an immune system can deficiency e.g. cancer or a viral, fungal, bacterial or parasitic infection. They can also be administered as a vaccine adjuvant to stimulate the response of a host to a vaccine. The compositions can be used to treat humans or vertebrate animals including dogs, cats, sheep is cows, goats, chickens, mice and monkeys. Perceding chemotherapy, with the immunostimulatory oligonuclectides should be useful for increasing the responsiveness of malignant cells to subsequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for treating and preventing parasitic infection by administration of unmethylated CpG oligonucleotides. The CpG oligonucleotides are able to stimulate the innate immune system via the activation of immune cells, such as antigen presenting cells, natural killer cells and granulocytes. The CpG oligonucleotides and the method can be used to treat and prevent parasitic diseases, such as malaria, helminth diseases, tick and mites in humans, animals and poultry. The oligonucleotides may be administered in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating and preventing parasitic infections using CpG oligonucleotides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                          The present invention describes a method using CpG containing oligonucleotides (ONS) as adjuvants for inducing an immune response. The method for inducing a mucosal immune response (MIR) comprises: (1) additionation a mucosal immune response (MIR) comprises: (1) additionation to a mucosal surface of a subject an ON, having a sequence including at least the formula (I); and (2) exposing the subject to an antigen to induce the MIR, where the antigen is not encoded in a nucleic acid vector: S/XIXCGXXX43' (I), where C and G = unmethylated, and X1, X2, X3 and X4 = nucleotides. The method can be used for treating a subject at risk of developing an allergic reaction, cancer or infectious disease. It can be used for treating asthmatic subject s, eczema, allergic rhinitis or coryza, hay fever, conjunctivitis, bronchial asthma, cuticaria, food allergies or other atopic conditions. The antigen may be derived from infectious organisms such as infectious bacteria, viruses, parasites or fungi. It can be used in humans or animals, e.g. bovine, equine, feline, swine, aquatic or avian species. The ONS act as potent successed adjuvants to induce immune responses at both local and remote sites against an antigen administered to the mucosal tissue. Both SAZATROBI to AAZATROBI tephacial examples of immunostimulatory

The present invention describes a method for treating and preventing parasitic infection by administration of unmethylated CpG coligonucleotides. The CpG oligonucleotides are able to stimulate the innate immune system via the activation of immune cells, such as antigen presenting cells, natural killer cells and granulocytes. The CpG coligonucleotides and the method can be used to treat and prevent parasitic diseases, such as malaria, helminth diseases, tick and mites in humans, animals and poultry. The oligonucleotides may be administered in conjunction with parasiticides or other therapeutic compounds after an conjunction with parasiticides or other therapeutic compounds after an conjunction with parasiticides or other therapeutic compounds after an can be treated or prevented include those caused by Plasmodium falciparum, P. ovale, P. malariae, P. vivax, P. knowlesi, Babbesia microsoma mansoni, Toxoplasma gondii, Trichinella spiralis, Leishmania major, L. donovani, L. braziliensis, and L. tropica. The parasite is
                                                                                                                                                                                                                                                                                                                   ö
conjunction with parasiticides or other therapeutic compounds after an organism has been diagnosed to be infected with parasites. Diseases which can be treated or prevented include those caused by Plasmodium falciparum, P. ovale, P. malariae, P. vivax, P. knowlesi, Babesia microti, B. divergens, Trypanosoma cruzi, T. gambiense, T. rhodesiense, Schistosoma mansoni, Toxoplasma gondii, Trichinella spiralis, Leishmania major, L. donovani, L. braziliensis, and L. tropica. The parasite is especially capable of causing malaria. The present sequence represents a parasitic infection preventing exemplary oligonucleotide sequence from

The present invention describes methods for inducing interleukin 6 (IL-6), interferon-gamma (IRN-gamma) or IL-12, or for stimulating natural killer cell (killer cell lytic activity. The methods comprise administering to the subject to a subject comprising a natural killer cell to an immunostimulatory nucleic acid. Also described are: (1) inducing IL-6 in a subject comprising administering to the subject to induce IL-6 in the subject to comprising a natural killer cell to the immunostimulatory nucleic acid, (2) stimulating natural killer cell lytic activity comprising exposing a natural killer cell lytic activity, (3) inducing interferon-gamma in a subject to treat an immune system deficiency comprising administering to the subject to induce system deficiency comprising administering to the subject to induce immunostimulatory nucleic acid. The immunostimulatory nucleic acid. The methods are useful for inducing IL-6, interferon-gamma or IL-12, or stimulating natural killer cell lytic immunostimulatory nucleic acid. The methods are useful for inducing IL-6, interferon-gamma or IL-12, or stimulating natural killer cell lytic activity in a subject, particularly a human. The methods are particularly useful for modulating an immune response. AAH50571 to AAH50671 represent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosineguantne (CpG) dinucleotides and an antigen in a carrier. The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for nucleic acids are also useful for an allergic reaction in response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject's leukaemia cells are more sensitive to chemotherapy. The compositions are useful for inducing an antigen specific immune response in the subject. The compositions can be also

The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for desensitising a subject against the occurrence of an allergic reaction in response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject's leukaemia cells are more sensitive to elemotherapy. The compositions are useful for inducing an antigen specific immune response in the subject. The compositions can be also used to treat or prevent the symptoms of asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Compositions comprising immunostimulatory molecules which comprise unmethylated CpG dinucleotides useful for ameliorating immune system deficiency, treating leukemia and desensitizing subject against allergic
                                                                                                                                                                                                                                                                                                                                                                                                              Immunostimulant, antiallergic; cytostatic; antiasthmatic; vaccine; gene therapy, CpG; immune system deficiency; tumour; cancer; infection;

```
The present invention describes an improvement to a method requiring the administration of interferon alpha (IFNalpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonucleotides with phosphorothioate backbones, palindrowes, or G-rich sequences. The agequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosine-guanine (CpG) dinucleotides and an antigen in a carrier. The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for acesonse to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for nucleic acids are also useful for a subject on administration prior to or in conjunction with a chemotherapy, so that the subject is leukaemia cells are more sensitive to chemotherapy. The compositions are useful for inducing an antigen specific immune response in the subject. The compositions can be also

The present sequence represents a positive control oligonucleotide, which is used to test proliferation of B lymphocytes. The specification describes an immunostimulatory oligonucleotide. This oligonucleotide stimulates proliferation of B lymphocytes. The immunostimulatory oligonucleotide is used in pharmaceuticals for the preparation of human medicines, or as a vaccine adjuvant or compositions, for therapeutic or prophylactic use, and containing one or more antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccine; cytostatic; virucidal; bactericidal; fungicidal; anti-parasitic; immunostimulatory; tumour; viral infection; bacterial infection; fungal infection; parasitic infection; cancer; asthma; infections disease; allergy; immune deficiency; phosphorothioate; se.
                                                                                                                                                                                                                                                                                                                                                                          New immunostimulatory oligonucleotide, useful as a vaccine adjuvant, stimulates proliferation of B lymphocytes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to immunomodulatory oligodecxyribonucleotides (ODNs) containing methylated or unmethylated cytosine-guanine (CpG) dinucleotides. Immunostimulatory ODN compositions lymphocytes and for treating, preventing or ameliorating an immune system deficiency e.g. tumour or cancer or viral, fungal, bacterial or parasitic infection and leukaemia. Neural ODN that contains a methylated CpG dinucleotide are useful for treating diseases such as systemic lupus erythematosus, sepsis and autoimmune diseases. Immunoinhibitory ODN containing CpG dinucleotides that are not in the stimulatory motif and decition and expense of the containing cpG dinucleotides that are not in the stimulatory motif and decition and expense of the containing the sequences at or near both termini have antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunostimulatory composition useful for stimulating immune response in a subject, comprises antigen and immunostimulatory nucleic acid comprising oligonucleotides having unmethylated cytosine-guanine dinucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Σ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       activity. The present sequence is an immunomodulatory oligodeoxyribonucleotide (ODN) 1d mutant. This is used to determine whether CpG or non-CpG ODNs causes B cell activation and immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                    The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immuno response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae, and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, tamphylocaccus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a the to a fhl immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vaccine, cytostatic, virucidal, bactericidal, fungicidal, anti-parasitic, immunostimulatory, tumour, viral infection; bacterial infection; fungal infection; parasitic infection; cancer, asthma;
                                                                           Vaccinating against tumors, infectious diseases, allergies and asthma using immunostimulatory Py-rich and TG nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccinating against tumors, infectious diseases, allergies and asthmausing immunostimulatory \mathrm{Py-rich} and \mathrm{TG} nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immunostimulate an uncleic acids can be pyrimidine for thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae, and/or campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthmá, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a final to a Thi immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Vaccine; cytostatic; virucidal; bactericidal; fungicidal; anti-parasitic; immunostimulatory; tumour; viral infection; bacterial infection; fungal infection; parasitic infection; cancer; asthma; infection alergy; infection; cancer; asthma; cancer; alergy; phosphorothioate; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vaccinating against tumors, infectious diseases, allergies and asthma
using immunostimulatory Py-rich and TG nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immuno-rodent subject is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, reaphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                  ö
against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone

The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immuno response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              anti-parasitic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccinating against tumors, infectious diseases, allergies and asthma
using immunostimulatory Py-rich and TG nucleic acids.

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytckines; It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinoma sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, heparitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Bbola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                             1. .15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the present invention tenaces to an immunostimitatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomash, autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, preventing, hay or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to an immunostimulatory composition, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA/RNA hybrid; phosphorothicate backbone; immunostimulatory; vaccine; infection; allergy; cancer; hypersensitivity; bio-warfare; immunostimulant; antiallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacterial; ss.

The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Boola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                          /*tag= a //tag= a //tote="optionally thymidine is replaced by uracil to form RNA or DNA/RNA hybrids. Thymidine is linked to at least one other base through a ribose sugar"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
